Abstract (en)
[origin: WO2010048651A1] The invention relates to an adjustable belt sander, comprising a continuous sanding belt (11) and a sanding module (4), which supports the sanding belt in the sanding region and has a profiled guide surface which faces the sanding belt back and represents a rounding radius to be sanded, wherein the sanding module has a disk shape, is mounted centrally rotatably about a pivot pin (5) on a main body (3) arranged transversely to the sanding direction and at the peripheral profile has at least two quadrant circle contours having different radii, which determine the respective guide surface for the sanding belt.
