Abstract (en)
[origin: WO2010021584A1] The present invention relates to a stanchion (10) of a load platform or the like. The stanchion (10) has a first end (11) and a second end (12). The stanchion (10) incorporates a stanchion housing (9) and a locking device (20) incorporating a lever (21). A first locking member (33) is arranged to be displaceable in at least a portion of the lever (21) and arranged to cooperate with a platform attachment (50) in connection to the load platform between at least a locked position and an unlocked position in relation to the platform attachment (50) for locking the first end (11) of the stanchion (10) to the platform attachment (50). The lever (21) is arranged to be turnable relative to the stanchion housing (9) about a turning axis (R1).
