Abstract (en)
[origin: WO2010040366A1] The invention relates to a closure for screwing on a container (1), comprising a closure cap (2) and a screw cap (3) rotatable mutually together and relative to each other, the closure cap (2) comprising a support body (5) that can be screwed together with the screw cap (3), the closure cap (2) and the screw cap (3) delimiting a chamber (6) for receiving a material, said chamber capable of being opened by rotating the screw cap (3) relative to the closure cap (2) and opening at least one penetration (7), and the screw cap (3) comprising a chamber wall (8), the free end (9) thereof encompassing a chamber floor (10) formed in the closure cap (2), having the object of designing and developing a closure such that an available space prescribed by the support body is used effectively for maximizing the volume of the chamber, characterized in that the screw cap (3) comprises a cover segment (34) on which the chamber wall (8) is formed.
