Abstract (en)
[origin: WO2010032088A1] The electrical connector assembly comprises first and second connectors (102, 104) intended to mate with each other. One of the connectors (104) comprises a first locking stop (132) and the other of the connectors (102) comprises a primary locking pawl (134) carrying a second locking stop (142) intended to engage the first locking stop (132) so as to lock the first and second connectors (102, 104) when they are mated. The first connector (102) comprises a CPA element (146) movable from an initial position to a final position only when the first and second connectors (102, 104) are properly mated. The CPA element (146) is intended to engage, in the final position, the primary locking pawl (134) so as to prevent the first and second locking stops (132, 134) to disengage.
