Abstract (en)

[origin: EP2340876A1] The shoe (112) has openings (123) respectively provided in opposite side and front shoe sections and defining an opening axis. Bearing pins of a touring ski binding are inserted into the openings along the axis to hold the shoe tiltable around the axis at the ski binding. One of the openings has upper and lower attachment sections (152a, 152b) that contact with an upper side and/or a lower side of the associated bearing pins for blocking sliding of the bearing pins from the openings in a vertical direction. An independent claim is also included for a binding system comprising a ski shoe.
