Abstract (en)
[origin: EP2341003A1] The packing has a blister carrier (3) arranged in a hollow space of a base (2) in a resting position and accommodating blisters (4). The base has a housing wall that includes a locking shoulder (10), and the carrier has a locking tongue (11), where the shoulder and the tongue are provided such that the carrier is partially withdrawn from the space via an opening by selective force effect on the base to establish a withdrawal position. The tongue is hinged to a base section (13), where the shoulder cooperates with the tongue to provide locking connection in the resting position.
