Abstract (en)
[origin: EP2341009A1] The package (10) has a front side (12) and a rear side connected with each other under formation of a packaging area (18). The front side is formed as a tearing side, and a tearing region (28) is formed smaller than the tearing side. The tearing region defines tear lines (30, 32) and a sealing area (36) at a packaging material of the tearing side. The region is sectionally separable from the material in a closed packaging condition by external force application under formation of a package opening. The tearing and rear sides are formed of a film material i.e. film laminate, in the region.
