Abstract (en)

[origin: EP2341291A2] The device has a gas collecting pipe (13) that supplies gas to a gas-operated burner, and a gas valve (14) placed between the pipe and the burner. The valve has a switch (15), a valve pin (16) and a passage nozzle (17), where a valve fastening plate (20) fastens the valve to the pipe and includes an upper part (21) that is installed from top on the pipe. The plate has a side part (22) that is formed as one-piece with the upper part, where the pin is passed through the side part. The plate has a supporting extension, which supports the switch from top and rear and is formed on the side part.
