Abstract (en)
[origin: WO2010049662A1] For displaying a valuable product, such as a mobile telephone or a camera or a satellite navigation unit, at point-of-sale, a display post assembly comprises an elongate hollow body (10) having a first open end (14) and a second open end (16) and a central cavity there between and an elongate slot (12) extending from said first end to said second end, and an elongate sleeve (20) which is matched to the shape and size of the hollow body so as to fit snugly there over. A separate top piece (22) is securable to the first end of the hollow body (10) and is configured so that when so secured it prevents removal of the sleeve (20) from the first end of the body. The top piece (22) has an opening there through communicating with the central cavity of the hollow body (10) and the top piece is also attachable to a cradle (30) which is adapted for releasable mounting of the valuable product.
