Abstract (en)
[origin: WO2010052739A1] A pressing method is described for an animal or vegetable product, for example grapes or crushed material, after its loading inside the drum (12) of a pneumatic press (10), the drum being equipped with an inflatable, inner pressing membrane (20) and with two or more drainage outlets (24, 25, 26) of juice or liquid of the product. The method comprises the phases of (i) leaving open only a subset (25) of said outlets; (ii) pressing the product by inflating the membrane; (iii) opening a higher number (24, 26) of said outlets, eventually all; (iv) pressing again the product by inflating the membrane. The method solves the problem of obtaining a better quality in the pressed juice or liquid by filtering it at best.
