Abstract (en)

[origin: WO2011047937A1] The invention relates to a method for producing a γ -TiAl base alloy solidifying over the β -phase (β - γ -TiAl base alloy) by means of vacuum arc remelting, having the following method steps: smelting a base smelting electrode (2) of a conventional γ -TiAl primary alloy having a deficit content of titanium and/or at least one β -stabilizing element in respect of the β - γ -TiAl base alloy to be produced in at least one first vacuum arc remelting step, allocating a quantity of titanium and/or β -stabilizing element corresponding to the deficit content of titanium and/or β -stabilizing element to the base smelting electrode (2) in uniform distribution over the length and circumference thereof, and alloying the allocated quantity of titanium and/or β -stabilizing element in the base smelting electrode to form the homogenous β - γ -TiAl base alloy in a final vacuum arc remelting step.
