Abstract (en)

[origin: WO2010049199A1] The invention relates to a membrane pump with a multi-part pump housing, an intake valve, an output valve and at least one operating membrane, wherein the pump housing is a basic housing with intake channel and output channel, an intermediate housing and a cover housing, wherein the working membrane is clamped between intermediate housing and cover housing. The invention provides that the cover housing (5) is braced against the basic housing (4) and that the basic housing (4) presses the intermediate housing (6) against at least one valve plate (20) of intake valve (18) and/or output valve (19).
