Abstract (en)
[origin: US2011203474A1] A fuze for a projectile having a firing chain has an interrupter for interruption of the firing chain. The interrupter is configured to snap from a safe position to an armed position when unlocked. A locking device is disposed to lock the interrupter in the safe position and to unlock the interrupter by way of an unlocking movement. The fuze is rendered compact and reliable in that the unlocking movement of the locking device is an axial movement.
