Abstract (en)

[origin: WO2010052029A1] The invention relates to a force-measuring ring (1) having an annular housing (2) which accommodates at least one piezoelectric measuring element (5), as well as having a pressure transmission element which is connected, preferably welded, to the housing via inner and outer circular diaphragm regions (12, 13). According to the invention, the inner and outer diaphragm regions (12, 13) of the force-measuring ring (1) are on opposite sides of a plane of symmetry (e) defined by the at least one piezoelectric measuring element (5).
