Abstract (en)

[origin: WO2010049317A1] The invention relates to a method for calling an instance of a function present within at least a first software module and requested by a second software module referred to as a calling software module. According to the invention, such a method includes: a step of obtaining a common execution context, said common execution context depending on at least one execution situation of said calling software module and including execution data; and a step of selecting said instance function from among at least two available instances based on the execution data of said common execution context.
