Abstract (en)
[origin: WO2010054943A1] The invention relates to an apparatus for producing a spunbonded fabric. In order to achieve an improved airiness of the spunbonded fabric and ready adaptability to process parameters which are to be changed, the spinning beam together with the blowing apparatus is configured to be pivotable in a pivoting unit. A required high airiness is achieved by the filaments running obliquely onto the fabric belt below the spinning beam. Rotary leadthroughs or elastic feed lines to the spinning beam make the slight pivoting possible.
