Abstract (en)
[origin: EP2345347A1] The cabinet (10) has a door assembly (11) for closing a cooling chamber (15). The assembly has a door (12) rotatably supported by pivot bearings around a vertical axis between a closed position and an opened position. Rails (18) are arranged parallel to a side wall (14) of the cabinet. The door is displaceable in the rails between a usage position in front of the chamber in which the door is pivotable between the opened and closed positions, and a parking position adjacent to the chamber in which the door is not pivoted. The assembly is formed as a cassette structure with a rectangular frame.
