Abstract (en)
[origin: EP2345542A1] The device has a receiving housing (10) with a receiving space (11) for the liquid medium, where the receiving space has an intermediate wall (20) with a clearance hole (21). A closure element (20fh) is arranged in the area of the clearance hole in a material- or form-fit manner. The clearance hole is formed in the intermediate wall. The closure element is moved away or destructible before the handling of the device by an end of a push rod (33) by the moving of the push rod, where the end of the push rod is disconnected by a valve seat (30s).
