Abstract (en)
[origin: EP2345785A1] The stopper has an assembling base plate mounted on a wall. A mobile body moves in rotation relative to the base plate, and carries a retention element of a casement when the mobile body is in a locking position. Maintenance units maintain the mobile body in the locking position. The maintenance units include a tab (23) integrated to the base plate and deformed elastically to apply to a blocking surface of the mobile body in the locking position. The tab exerts pressure on a blocking surface, where the blocking surface comprises a thrust (25).
