Abstract (en)  
[origin: DE102010004771B3] The hinge has two band portions (1a, 1b) including reel sections (2a). An adjusting spindle (20) is kept at a hinge strap (16) and extended into a slot (17) such that immersion depth of the hinge strap is adjusted into the slot by turning the adjusting spindle. An absorption part (8) includes a fixing screw (21) that is arranged with a screw longitudinal axis at a specific angle of the hinge strap. The fixing screw is directly pressed on the hinge strap after tightening the screw such that adjustment required for displacement is eliminated by the adjusting spindle.
