Abstract (en)  
[origin: DE102010004772B3] The hinge has hinge parts (1a, 1b) comprising hinge rolling sections (2a, 2b) connected with each other at a vertical axis in a rotatable manner. One hinge part has passage holes for fastening to an extruded profile. The passage holes are formed as longitudinal holes (13) extending in a horizontal direction (y). The hinge part receives a pair of thread pins (14) in an upper area and a lower area. The thread pins are arranged in a horizontal distance to each other. The thread pins cause tightening by wedging in an opposite direction to a fixation of the hinge part.
