Abstract (en)

The present invention relates to a door for a domestic appliance and a refrigerator (200) having the same, and more particularly, a door (210) for a domestic appliance and a refrigerator (200) having the same, in which a curved surface portion (221) is formed on a portion of a door (210) of a domestic appliance for user s convenience at the time of opening of the door (210) and improving a sense of estate of the domestic appliance. For achieving the object, the present invention provides a door (210) for a domestic appliance and a refrigerator having the same, including a door body portion rotatably mounted to a domestic appliance body having a storage space, a cover member (220) on a front of the door body portion, the cover member (220) having a curved portion (221) on one side thereof, a handle portion (230) in rear of the curved portion (221), the handle portion (230) having a holding portion (231).
