Abstract (en)

A device for winding watches, particularly self-winding watches, comprising a supporting structure (2) provided with a seat (3) for accommodating the watch to be wound. The seat (3) is connected to transmission means (4) operated by a motor (5) and is inclined with respect to an axis (41) that is jointly connected to the supporting structure (2). The seat (3) can oscillate in a substantially conical manner about the axis (41) jointly connected to the supporting structure.
