Abstract (en)

[origin: WO2010015397A1] The invention relates to a medical implant having a mesh structure comprising interwoven wire elements (11, 12, 13, 14), wherein at least two wire elements (11, 12) each have a free wire end (11', 12'). The invention is characterized in that the two free wire ends (11', 12') form a terminating knot (30) together with at least one further wire element (21) which is disposed on the circumference of the mesh structure (10) and limits an axial end (15) of the mesh structure (10), wherein the free wire ends (21) are connected to each other in a positive fitting manner.
