Abstract (en)

[origin: WO2010037151A2] The invention relates to an arrangement for stabilizing the positions of receptacles (5, 6) filled with flowable material in standardized containers (1), which on the inside wall in the ceiling region and the floor region are provided with retaining eyelets (2 or 3), wherein the receptacles (5, 6) are stacked in two or more levels. In order to achieve secure dimensionally stable storage of the receptacles, a layer composed of flexible, high-tensile woven fabric (7) is inserted between receptacles (5, 6) stacked on top of each other, said woven fabric being fixed to the retaining eyelets (2) provided in the ceiling region on the side wall by way of tensioning elements (8, 9).
