Abstract (en)  
[origin: WO2010049656A1] The invention relates to a modular construction system comprising a system in which the carcass results from the juxtaposing and/or stacking assembly of a plurality of prefabricated units (1), each of said units (1) including a framework made up of the juxtaposition in coaxial alignment of multiple elements forming a frame (2), spaced two-by-two and assembled by means of bottom girders (30) and top girders (31). The top or bottom girders (30, 31, 34) of each unit run along the outside of the frames (2), and each of said girders (30, 31) is designed to be securable to the equivalent girder (30, 31) of a juxtaposed unit (1); while each of the top girders (31) is designed to be capable of being shared by two stacked units (1) and of forming a bottom girder thereof.
