Abstract (en)

[origin: WO2010060726A2] The invention relates to a type of refrigeration device and to the method for producing the door. The refrigeration device (1) comprises a door (3) with a main door part (4) and a front panel (5) that is connected to said main door part (4), the front panel (5) at least partially forming the front face of said door (3). The main door part further comprises the first wall (6), which forms the rear face of said door (3), the second wall (7) is situated at a defined distance from the first wall (6) and an insulation layer (8) is located between both walls. According to the invention, the refrigeration device (1) also comprises an adhesive device (9) and said front panel (5) is permanently bonded to the main door part (4) with the aid of said adhesive device (9).
