Abstract (en)
[origin: WO2010057792A2] The invention relates to a domestic refrigeration appliance (1) comprising a carcass (2) and a door (3, 4) hinged to said carcass (2) which delimit a heat-insulated refrigeration chamber. The domestic refrigeration appliance (1) further comprises a refrigeration device (7) for refrigerating the refrigeration chamber, an icemaker and/or water dispenser (8, 9), a first electronic module (20) for controlling/regulating the refrigeration device (7), a second electronic module (25), which is separate from the first electronic module (20), for controlling/regulating the icemaker and/or water dispenser (8, 9), a display/input module (12) which is used to adjust and/or display operating parameters associated with the first electronic module (20) and to actuate functions associated with the icemaker and/or water dispenser (8, 9), and a bus system (21) connecting the display/input module to the first electronic module (20) and to the second electronic module (25).
