Abstract (en)

[origin: WO2010034928A1] The invention relates to a platform (1) for a computer network for managing and sharing mostly unstructured data passing through said network, and having an infrastructure comprising an information system (2) comprising a database (14) and/or data servers (14) as well as terminals (4, 5) from which the users (6) generate, modify or consult data of the information system (2), characterised in that the information system (2) includes unique data to be shared and is insulated from the terminals (4, 5) of the users (6) by an application (3) that manages the accessibility to said information system (2) and/or the security of the unique data contained by the same by a physical break (12) of the network protocol (7) used for communication between the information system (2) and the terminals (4, 5) of the users (6).
