Abstract (en)
A paver support system includes an edging rail (12,112,212,312) or bracket that engages an underlayment layer. The paver support system contains a plurality of paving elements (16a,16b) within a prescribed area bordered by the edging rail and supported on the underlayment layer (14). The cooperating underlayment layer and edging rail are self- supporting to maintain the relative spatial relationship of the plurality of paving elements supported thereon.
