Abstract (en)

[origin: EP2348160A2] The slide (3) has a suspension section in which a hole is introduced for suspension of the slide on a threaded collar of an associated revision opening (12). A discharge section is provided for discharge of liquid escaping out from a sanitary installation reservoir i.e. flush-mounted siphon (2). The discharge section is fixedly angled or flexibly angled with respect to the suspension section. The suspension section and the discharge section are integrally connected by two parallel film hinges. The suspension section and the discharge section are made of a flexible plastic film.
