Abstract (en)

[origin: EP2348184A2] The element (10) has a flush-fitting glazing including a disc arrangement (20) that is covered in a frame arrangement (16). A rest device (22) fastens the disc arrangement in the frame arrangement. The rest device is accommodated between an outer contour front side (26) of the disc arrangement and a turned soffit front side (28) of a glazing opening (18). The rest device includes a block (52) for limiting engaging movement after locking. Isolation filters (36) are connected with box and cover metal sheets (32, 34) through a large surface of a bonded joint i.e. poly-urethane adhesive (38). An independent claim is also included for a method for manufacturing a building closure element.
