Abstract (en)
[origin: EP2348257A1] The configuration of the invention includes: heating chamber (34) provided with glass-fitted door (31b) at a front opening, for housing an object to be heated; waveguide (33) for transmitting microwaves from microwave generating section (32) to heating chamber (34); directional feeding section (39) having directivity, for supplying the microwaves from waveguide (33) to heating chamber (34); driving section (41) for rotationally driving directional feeding section (39); and control section (411) for controlling driving section (41) to turn directional feeding section (39) to a direction of the door and supply the microwaves into a space above the tray, using the inside of the glass as a principal transmission channel, wherein a defrosting function and a grilling function are performed in an automatic and continuous manner without a user's operation.
