Abstract (en)  
[origin: WO2010044068A1] A receptacle for a liquid such as drinking water, of which the top side may be sealed by a cover comprising an open/closed filling aperture (70) that may be closed by means of a filling flap (50) which is pivotable about an axis and, in its closed position, rests in sealing manner against the underside of the cover zone enclosing the filling aperture, said filling flap being biased by a spring (54) into the closed position, a disengageable lock (58) being associated with said flap (50) and locking, in its locked position, said filling flap (50), and a disengaging element resting in the cover, which, when selectively actuated, drives the lock into a disengaged position.
