Abstract (en)

[origin: WO2010037941A1] Bracket for hanging an object, comprising a hook (130) formed of articulated links (131, 132) able to move between a stowed position and a hanging position. The plate (110) comprises a tie (140) in order to be connected to the handle (P) of the object (S) for joining the bracket (100) and the handle (P) together. The length of the tie is at least equal to the length of the hook (130) in order that the handle (P) can rest in the hook (130) without pulling on the tie (140).
