Abstract (en)
[origin: WO2010046577A1] The present invention relates to a device (1) for protecting a pacifier (2), characterized in that it comprises: - a housing (3) for the pacifier, the pacifier having an external position where the pacifier is outside of the housing, the pacifier having an internal position where the pacifier is situated inside the housing; - an orifice (6) allowing the pacifier (2) to move from its internal position to its external position and from its external position to its internal position; and - means (4, 40) for applying a return force (5) to the pacifier, the return force drawing the pacifier from its external position to its internal position. The invention also relates to a method employed in this device. The invention protects a pacifier from dirt, germs and microbes and therefore improves the hygiene of the pacifier.
