Abstract (en)

[origin: WO2010057967A1] The invention relates to a method and a device for manufacturing thick slabs of steel with a cast thickness exceeding 360 mm and a cast width exceeding 1000 mm in a continuous casting plant. Method steps and a plant configuration are proposed which guarantee the manufacture of high quality steel strands and slabs with good internal quality and low incidence of cracking, even when steel strands are cast in a thickness range of 360 to 450 mm.
