Abstract (en)

[origin: WO2010046561A1] Hollow body (1) that extends along a main axis and that comprises a neck (5) provided with a first relief suitable for allowing a predetermined angular indexing of the hollow body (1) about its main axis relative to a device for gripping the hollow body (1), said hollow body (1) being characterized in that the neck (5) comprises a second relief, offset axially with respect to the first relief, suitable for allowing a predetermined angular indexing of the hollow body (1) about its main axis relative to a second gripping device that is superposed over the first. A process for handling such a body is also claimed.
