Abstract (en)

[origin: WO2010004357A1] A fishing rod(10) has a single, hollow, primary tube(11), preferably of composite material, wherein one or more open ports (20) extend through aligned holes on opposite sides of the hollow tube. The ends (54) of the ports (20) are bonded to the walls of the hollow tube. The ports improve the stiffness, strength, aerodynamics, and aesthetics of the fishing rod.
