Abstract (en)

[origin: WO2010037954A1] Writing implement comprising a deformable hollow body whose long axis is along a central axis (X) as far as one end, and an end member (20) comprising a tubular portion (24) which has an inner face (24c) with a plurality of first identical projecting reliefs (27) suitable for engaging with and deforming the hollow body when the end member is fitted by engagement of its tubular portion around the end of the hollow body. The inner face (24c) of the tubular portion also comprises a plurality of second projecting reliefs (28) of a height measured radially from the inner face which is less than that of the first projecting reliefs (27) and is designed so that these second reliefs apply pressure to the hollow body deformed by the first reliefs.
