Abstract (en)
[origin: WO2010046596A1] A device for connecting at least two shockwave guide tubes (11, 12) comprises a casing (14) that comprises a substantially cylindrical housing able to house a detonator and which runs in a longitudinal direction of the housing, the casing (14) comprising, at one end, a mounting block (20) for the shockwave guide tubes (11, 12) in a direction parallel to the longitudinal direction of the housing. The mounting block (20) comprises two substantially semi-annular slots (21, 22) positioned symmetrically with respect to a longitudinal central axis (X) of the housing, and two through-openings (25, 26) for the shockwave guide tubes (11, 12) running parallel to the longitudinal direction and opening respectively into the substantially semi-annular slots (21, 22).
