Abstract (en)  
[origin: WO2010048909A1] The invention relates to a component for a construction, said component comprising at least one wood-retainer composite element (I) consisting of at least one wood element (2) and one retainer (III), the wood element (2) and the retainer (III) being connected in an essentially non-positively engaged and/or form-fitting and/or integrally bonding manner. The wood element (2) and the retainer (III) are at least partially connected by thrust force. At least one solar element, especially a heliothermal element (5), is integrated into the retainer (3) and/or a photovoltaic element (6) is arranged on a side (7) of the retainer (III) facing the light. The photovoltaic element is especially at least partially hydrophobic.
