Abstract (en)

[origin: WO2010055140A1] This element comprises both overall heating means (7, 9) and local heating means (10) for generating both an ambient temperature and local heating of the specimen so as to be able to simulate a mechanical shock. The element therefore lends itself to various tests capable of better evaluating the self-heating or auto-ignition characteristics of a material subjected to a thermal or mechanical stress.
