Abstract (en)

[origin: EP2184729A1] The display arrangement has two spaced holding profiles (2,2.1) for holding the clamped objects and a device for rear lighting objects clamped by the holding profiles. Each holding profiles has a connecting groove longitudinally extending the profile for connecting a perimeter of the object to the profile. A light source or light source unit following the longitudinal extension of the holding profiles, which are provided with one or more light sources behind the reflector from a viewing direction of the object, with a main radiation direction. An independent claim is included for a holding profile for setting up the display arrangement.
