Abstract (en)
[origin: EP2351697A1] The unit has a container (10) with a frame formed with longitudinal and transverse carriers (12, 13) on a stable section of a side wall. The container has roof and base areas (18, 19). Upward exposed valves of gas bottles are arranged on the base area, where the bottles are arranged in the container in rows. The rows extend adjacent to each other in longitudinal direction of the container. The bottles are grouped by tensioning devices against the section. The bottles contact with a part of a circumference of a bulge, and are fixed against slipping in the direction.
