Abstract (en)

[origin: EP2351901A2] A mounting set 5 for securing a frame 1 to a setting frame 3 comprises two interacting mounting elements 7 and 9. A bent-over end of the first mounting element 7 forms a projecting lip 23. The second mounting element 9 comprises a row of projections 35 positioned one behind the other. During the mounting activity the lip 23 of the first mounting element 7 catches on one of the projections 35 of the second mounting element 9. Before the frame 1 is secured to the setting frame 3, mounting elements are first attached while distributed over the periphery of the frame and the setting frame. Subsequently, the frame 1 can be simply clicked into the setting frame 3 as a result of which quick mounting is made possible.
