Abstract (en)  
[origin: EP2352206A1] An antenna reflector installed on an antenna support rod includes a main support rod, a left support rod, a right support rod and a plurality of connecting support members provided between the main support rod and the left support rod, the right support rod. Two ends of each connecting support member are fixed on the left support rod and the right support rod with screws, respectively. A connecting pin which allows the connecting support members to be rotated relative to the main support rod is provided between at least one of the connecting support members and the main support rod. The antenna reflector is simple in design, and may be easily assembled, conveniently packaged and folded.
