Abstract (en)
[origin: WO2010049520A2] The invention relates to a method for inputting data through a keyboard to whose keys individual characters of a character set are assigned, wherein the number of keys is less than the number of characters of the character set and wherein the character set preferably contains punctuation marks. An improvement in operability is accomplished in that sequences of key strokes corresponding to sequences of characters which are impossible or improbable in the context of the data to be input are used for encoding characters or character sequences that are not assigned to a key.
