Abstract (en)
[origin: US2010050101A1] A system and method perform automated, intelligent conversion of an information object from one type to another. An original information object is parsed to ascertain the nature of individual data items within the object. Relevant data items are extracted and a new object is populated intelligently based on the extracted data. Pattern matching, user input, defined fields, or any combination thereof can be used to identify the data to be extracted from the original object.
