Abstract (en)

[origin: WO2010055425A2] A method and system for providing translation services between a first party speaking a first language and a second party speaking a second language, the parties being present in the same place and using a single telecommunication device, including at least (a) providing in the telecommunication device an option to select and store an identifier of the first language; (b) receiving and storing in the telecommunication device an identifier of the first language; (c) providing in the telecommunication device an option to select an identifier of the second language; (d) receiving an identifier of the second language via the telecommunication device; and (e) based on the identifier of the first language and the identifier of the second language, connecting a telecommunication call via the single telecommunication device to a translator able to translate between the first language and the second language.
